

Time to be a Genius - Time to choose a Smarter Network with IP Integration and Extreme Networks

Save up to 70% on Energy Bills

A Smarter Network requires less power and cooling, which leads to costs reduction by 50%. Along with automated power management and hibernation features, you can save up to 70% on your power bills.

Reduce your Support Costs

A single operating system and consistent features throughout the entire range mean that support costs are dramatically reduced.

Deploy and Troubleshoot your Network Easily

Network Automation gives you the ability to dynamically manage time-consuming adds, moves and changes, therefore reducing the level of resources and time that you need to manage your network.

Limit Downtime due to Network Failure

A Smarter Network ensures the delivery of your applications to your users. Not only does it have automatic sub 50 millisecond failover – there are eight hardware queues to provide unprecedented voice, video, and data quality for mission-critical business applications.

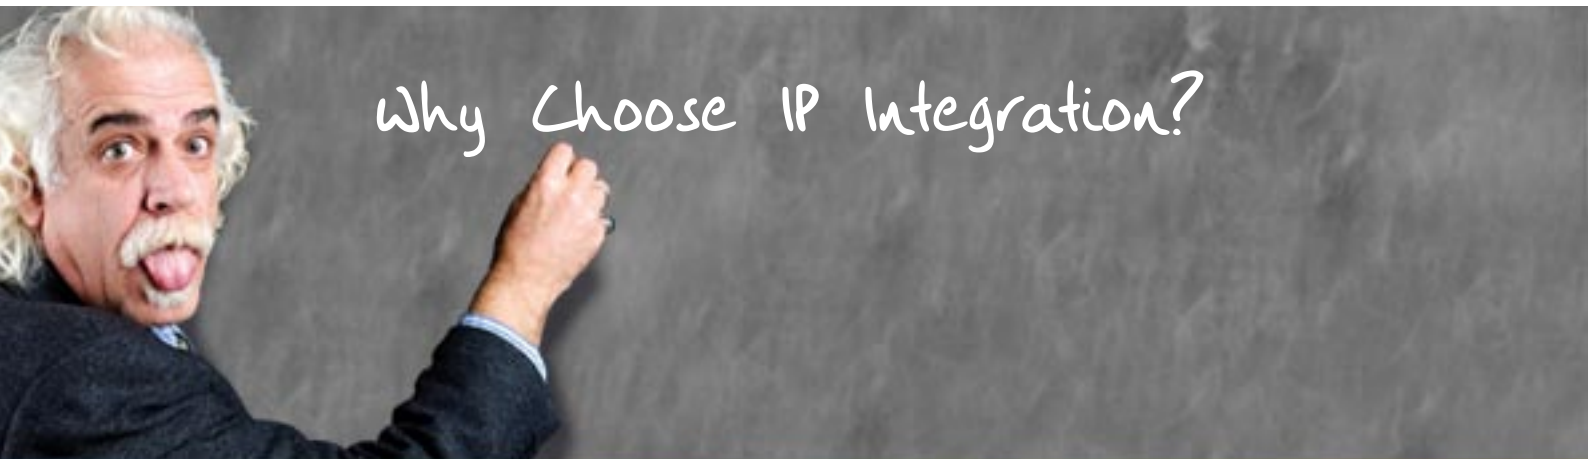

Protect your Network against Security Threats

A Smarter Network can detect a non-secure device trying to access your systems and can be configured to detect many other types of security events. It thus decreases your potential security risk. It provides the ability of assigning correct and secure access based on the role of the user. These policies can be simply managed and deployed which reduces intervention from IT staff allowing them to focus on other projects.

Reduce your Acquisition Costs

An Extreme Network Smarter Network is typically a 30% – 50% lower initial outlay than their main competitors. Costs can be future proof with Lifetime Warranty on selected products.
